

ON THE ROAD TO SUCCESS!

PREPARATION FOR THE RACING SEASON.

FROM WEANING, AND SCOUTING, UNTIL THEIR FIRST FLIGHTS.

Youngsters grow from a tiny nestling into a young pigeon in a short span of time. Weaning youngsters usually occurs at around 22 to 25 days. The growth process is certainly not complete by then. They still have to grow into young adult pigeons. That demands a lot from their metabolism. That is why a cereal mixture with **highly digestible proteins (= building blocks)** is definitely not an unnecessary luxury after weaning. Feeding a high-quality **BEYERS breeding mixture** in sufficient quantities for \pm 5 to 6 weeks is the most appropriate support. You do not have to worry about feeding too much fat during this stage of the growth cycle and the significant period leading up to the start of the racing season. They can handle the first young down moult best when they have a fat and protein rich mixture.

Depending on the programme, the desired **peak in condition** and the **timing you plan** for your young bird training you can build up training intensity by feeding your birds a lighter mixture (i.e. adding more crude fibre). Do not feed smaller quantities. It is better to add extra fibre, which means more carbohydrates and less fat, and that will increase their desire for training. As the duration of the training flights increases, we gradually provide more fats to provide the required energy. Playing with the **balance of carbohydrates to fats**.

For this period (from about 5 to 6 weeks up to 2 weeks before young bird training), **BEYERS** has some versatile and quality mixtures (**light, protein poor and with sufficient carbohydrates**) that, in combination with a **BEYERS** breeding mix (**richer in protein and fat**), provide that balance of carbohydrate and fats perfectly.

From 2 weeks before young bird training, we recommend replacing the breeding mixture with a racing mixture to facilitate the transition to the racing season. Just before the start of the racing season, you can switch to one of our sport mixtures with an appropriate feed schedule.

PERIOD	MIXTURES	PREMIUM	GALAXY	ENZYMIX
Up to \pm 5-6 weeks after weaning:	100% breeding mixture	100% PREMIUM SUPER BREEDING	100% GALAXY BREEDING	100% ENZYMIX 7/40 MS STARTER
When the youngsters begin to moult their baby feathers, you can add a moulting mixture until they are back in plumage.	50% breeding mixture + 50% moulting mixture	50% PREMIUM SUPER BREEDING + 50 % PREMIUM SUPER MOULTING	50% GALAXY BREEDING + 50% GALAXY MOULTING	50% ENZYMIX 7/40 MS STARTER + 50% ENZYMIX 7/50 MS MOULTING METHIONINE
From \pm 5-6 weeks after weaning up to 2 weeks before young bird training:	Ideal qualitative mixture suitable for youngsters. BEYERS PREMIUM SUPER BREEDING - 20 KG

- Contains top quality ingredients, such as small cribbs maize and toasted soya beans, a source of easily digestible proteins, with optimal nutritional value. All this guarantees optimal absorption of the mixture.
- Specifically tailored to pigeons' needs during the breeding period.

Ingredients: small cribbs maize, toasted soya, white wheat, white dari, extra red sorghum, small green peas, small yellow peas, safflower, maple peas, dun peas, popcorn maize, vetches, winter peas, mungbeans, buckwheat, lentils

Carbohydrates	55.10 %
Crude protein	17.10 %
Crude fat	5.70 %

BEYERS PREMIUM VANDENABEELE - 20 KG

- Easily digestible and low-protein racing mixture. Rich in carbohydrates and fats in perfect balance that quickly and sustainably delivers energy.
- Main ingredients: Small cribbs maize, sorghum, safflower seed and paddy rice

Ingredients: small cribbs maize, paddy rice, extra white dari, safflower, mungbeans, white wheat, extra red sorghum, peeled oats, barley, rapeseed, linseed, buckwheat

Carbohydrates	56.00 %
Crude protein	10.70 %
Crude fat	8.50 %

BEYERS PREMIUM YOUNGSTERS - 20 KG

- A combination of cereals and seeds required for youngsters of 5-6 weeks after weaning in order to grow further into mature pigeons during their first year.
- A mixture with highly usable proteins (=building materials) for optimal further growth and development of the skeleton, muscles and feathers. This is in combination with a perfect balance between carbohydrates and fats in order to increase their training lust and likewise to provide the necessary energy for these training flights.
- As a sport mixture for youngsters, ideal for the final feeding rounds before the basketing of flights up to 6 flight hours, this in combination with **PREMIUM VANDENABEELE** or **PREMIUM WAL ZOONTJENS YELLOW** at the beginning of the week.

Ingredients: extra white dari, maize small cribbs, safflower seed, paddy rice, sorghum red, wheat white, hemp seed, maize merino, toasted soya beans, vetches, small green peas, trappers, mung beans, sunflower seed peeled, rape seed black, linseed, oats peeled, peeled barley, buckwheat, dun peas, maple peas, lentils, brown rice.

Carbohydrates	52,50 %
Crude protein	14,50 %
Crude fat	10,30 %

BEYERS GALAXY SPORT LIGHT - 20 KG

- Easily digestible and highly energetic sports mixture, ideal for flights of < 400 km
- Basis of paddy-dari-safflower supplemented with 4 different types of maize, fat-rich seeds and grains
- Perfect balance of proteins, prevents a slump after some 7 flights

Ingredients: white sorghum, paddy rice, safflower, small cribbs maize, cribbs maize, Bordeaux maize, merano maize, white wheat, peeled oats, peeled barley, peeled sunflower seeds, hempseed, white millet, black rapeseed, mungbeans, canary seed, linseed, vetches, thistle seed.

Carbohydrates	54.20 %
Crude protein	12.50 %
Crude fat	10.90 %

400 ML

ROYAL JELLY

CONDITION PREPARATION WITH PROPOLIS AND GINSENG.

SUPPORT

YEARROUND

- Honey will provide your pigeons with natural sugars and effectively works against slime after exertion.
- Royal jelly will give your pigeons both energy and power.
- Panax ginseng fends off fatigue and eliminates the birds' stress levels.
- Propolis acts like a natural repellent.

Instructions:

20 ml / 2 l of drinking water or 1 kg feed

- Racing season: 1 or 2 x per week (upon arrival back home and period up to basketing)

1000 ML

RELOAD

LIQUID SOLUTION CONTAINING THE MOST IMPORTANT AND ESSENTIAL AMINO ACIDS, ELECTROLYTES, MINERALS AND TRACE ELEMENTS.

RECOVERY

YEARROUND

- Contains the main essential amino acids for pigeons: lysine and methionine, which boost the effectiveness of the proteins in the feed, and glutamine, which is important for the muscles and is regarded as a major food source for the intestinal cells.
- By eliminating waste products from the body thanks to the addition of choline and by replenishing consumed salts (potassium chloride, sodium chloride) and minerals (calcium, magnesium), this will help your pigeons to recuperate faster.
- Sodium selenite is a source of selenium, which is an essential trace element in the diet and supports good metabolism. Other oligo elements in chelate form (zinc, copper) ensure optimal absorption of the nutrients from the feed.
- Simple (dextrose) and complex sugars (maltodextrin) provide an energy boost after their return.

Instructions:

30 ml / 2 l drinking water.

- All year round: 2 x per week. During the racing season: the first 2 days after homecoming. Up to 9% of the daily ration.

500 GR

ELECTROLYT

ELECTROLYTES

RECOVERY

SPORT

- Promote recovery after flight.
- Eliminating waste products from the body and replenishing consumed salts (potassium chloride, sodium chloride) and minerals (calcium, magnesium) will help your pigeons recuperate faster.
- Rich in B vitamins (B1, B2, B3 and B6) and the essential amino acid methionine.
- Contains simple sugars (dextrose, sorbitol) for an energy boost.

Instructions:

5 gr / 2 l of drinking water

- Racing season: day of homecoming and day after (especially at high temperatures)
