CARBO-VITA

A VITAMIN SUPPLEMENT WITH A UNIQUE BLEND OF SLOW AND FAST SUGARS FOR A POWERFUL ENERGY BOOST. WITH THE ADDITION OF MEDIUM-CHAIN TRIGLYCERIDES (MCT) AND A HERBAL TONIC AS ADDITIONAL AVAILABLE ENERGY SOURCES.

Contains very long maltodextrin chains (slow sugars) and dextrose (fast sugars), ideal for the day before basketing to improve flight performance.

A comprehensive mix of vitamins (A, D3, B1, B2, B3, B6, B12, C, E, K3 and folic acid) that promote overall fitness levels and support resistance and recovery.

Medium chain triglycerides, or MCTs for short, are a special type of fat that pigeons can use quickly and efficiently as fuel.

- Fast & instant energy.
  Unlike ordinary fats, MCTs do not need to be broken down extensively in the digestive tract first. They go directly to the liver, where they are quickly converted into energy. Ideal just before a flight or in the recovery phase afterwards.
- Supports fat burning
  Pigeons mainly use fat as an energy source during longer flights. By adding MCTs, you stimulate your pigeon's fat-burning system. It helps them use their own fat reserves more efficiently, allowing them to perform longer and more consistently.
- Does not aggravate digestion.
  MCTs are easily digestible and do not stress your pigeon's digestive system.
- Faster recovery.
  After a flight, it is important that your pigeons regain their strength quickly. MCTs can help with this, as they quickly provide the body with the energy it needs to support recovery and muscle building.

The addition of a herbal tonic (Ginseng and maca powder) improves physical performance by increasing energy levels and stamina, strengthens the immune system and contributes to the overall health and condition of pigeons.

INSTRUCTIONS:

20 gr / 2 L of drinking water or 1 kg feed (= 2 measuring spoons). Max. 2,5% of the daily ration.

During racing season:
- 1 to 2 days before basketing.
- On returning home, to aid recovery after a tough flight.

450 g
